

METHODS AND COMPOSITIONS FOR TREATING NEOPLASMS

Abstract of the Invention

5

The present invention comprises the periodic administration of a solution of neuraminidase to a patient with a neoplasm until the neoplasm has receded. The administration of the solution of neuraminidase can be administered by subcutaneous injection, intramuscular injection, intravenous injection, nasal administration, sublingual administration or transdermal administration. The present invention is effective in treating a wide variety of neoplasms.
